

Instruction Manual

ZoneSENSOR

Introduction

The sensor is an active motion detector, it emits high-frequency electro-magnetic wave (5.8GHz) and receives their echo. The sensor detects the change in echo from even the slightest movement in its detection zone. A microprocessor then triggers the "Switch light ON" command. Detection is possible through doors, panes of glass or thin walls.

Important: persons or objects moving towards the sensor are detected best!

Sensor information

Item/ Unit	Parameter	Parameter
Power supply	220 -240VAC	Power frequency
Installation sit	Indoors, ceiling mount	Transmission power
HF system	5.8GHz CW radar, ISM band	Detection angle
Reach	2-10meter (radii), adjustable	Rated load
Time setting	10 sec – 30 min	Light control
Power consumption	Approx. 0.9W	Installation height

0 1	30sec	1 1	20min

S1 and S2

Reach is the term used to describe the radii of the more or less circular detection zone produced on the ground after mounting the sensor light at a height of 10m, switch to the on is "1", switch to the off is "0"

NOTE: The above detection distance is measured using a person who is between 1.6m~1.7m tall with an average build, moving at a speed of 1.0~1.5m/sec. if any of these variables are changed, the detection distance will also resultantly change.

S3 and S4

Time can be set 10s to 10min. Any movement detected before this time elapse will re-start the timer. It is recommended to select the shortest time for adjusting the detection zone and for performing the walk test. Switch to the on is "1", switch to the off is "0"

NOTE: after the light switches OFF, it takes approx. 1sec before it is able to start detecting movement again. The light will only switch on in response to movement once this period has elapsed.

S5 and S6

The chosen light response threshold can be infinitely from approx. 50lux-2000lux (Day). switch to the on is "1", switch to the off is "0"

S7 and S8

When don't have any movement, you can chose dim level from 0-30%. Switch to the on is "1", switch to the off is "0"

S9 and S10

In the sense Dim level setting a good case, you can set the complete-off time. Switch to the on is "1", switch to the off is "0"; the corresponding file of switch location and detection distance.

Troubleshooting

Malfunction	Cause	Remedy
The load will not work	- Wrong light control setting selected - Load faulty - Mains switch OFF	- Adjust setting - Change load - Switch ON
The load work always	- Continuous movement in the detection zone	- Check zone setting
The load work without any identifiable movement	- The sensor not mounted for detecting movement reliably - Movement occurred, but not identified by the sensor(movement behind wall, movement of a small object in immediate lamp vicinity etc.)	- Securely mount enclosure - Check zone setting
The load will not work despite movement	- Rapid movements are being suppressed to minimize malfunctioning or the detection zone you have set is too small	- Check zone setting

Manuel d'instructions

ZoneSENSOR

Introduction

Le capteur est un détecteur de mouvements actif, il émet des ondes électromagnétiques à haute fréquence (5,8 GHz) et capte leur écho. Le capteur détecte la modification de l'écho dès le moindre mouvement dans sa zone de détection. Un microprocesseur déclenche ensuite la commande « allumez la lumière ». La détection peut se faire à travers des portes, des panneaux de verre ou des panneaux de verre ou des murs de faible épaisseur.

Important: le capteur détecte le mieux les personnes ou les objets qui se déplacent dans sa direction!

Spécificités

Elément/ Unités	Valeur	Elément/ Unités	Valeur
Alimentation	220 -240VAC	Fréquence	50/60Hz
Installation	Intérieur, fixation au plafond	Puissance de transmission	<10mW

Gebruiksaanwijzing

ZoneSENSOR

Introduction

De sensor is een actieve bewegingsdetector die hoogfrequente (5,8 GHz) elektromagnetische golven uitzendt en de weerkaatsing ervan opvangt. Bij de minste beweging in de detectiezone stelt de wijziging in de weerkaatsing vast. Vervolgens geeft een microprocessor opdracht om het licht aan te steken.

Het detecteren kan gebeuren doorheen deuren, glazen panelen en dunne muren.

Let wel: de sensor detecteert het best personen of voorwerpen die zich in zijn richting verplaatsen!

Informatie over de sensor

Gebrauchsanleitung

ZoneSENSOR

Einleitung

Der Sensor ist ein aktiver Bewegungsdetektor der elektromagnetische Hochfrequenzwellen (5,8 GHz) sendet und deren Reflexion auffängt. Jede kleinste Bewegung in der Sensorzone wird durch die veränderte Reflexion erkannt. Anschließend gibt ein Mikroprozessor den Auftrag, das Licht einzuschalten. Die Erfassung kann durch Türen, Glaspanele und dünne Wände erfolgen.

Achtung : Der Sensor erfasst am Besten Personen oder Gegenstände die sich zu ihm hin bewegen.
