

BLIND

medium I QR-LP70

The BLIND product family is a longstanding classic in our collection of built-in orientable spots for interior use. With fixtures perfectly suited to sleek contemporary, traditional or classical interiors.

A plaster-in fermacell box forms the seamless housing into which the fitting is located by a strong but simple magnet system. The fixture is composed of a metal plate where the lamp holder is mounted with a clamp, allowing total control and movement of the light source.

BLIND is offered in 3 formats, each available with 1, 2 or 3 adjustable lampways. The latest LED versions added to the BLIND downlight range stand out in energy efficiency and lighting quality, with light output of up to 104 lm/W and CRI ≥ 90, achieved through the combination of the latest COB technology and a highly efficient reflector.

Accessories (to be ordered separately) include honeycomb and correction filters as well as optional mounting brackets for the fermacell housing, praised by installers for their convenience. The BLIND range is available in Matt White Textured, Matt Black Textured or Chrome finish.
